Introduction

This report describes the questionnaires answered on ED by students studying DATA2X02 in the second semester of 2021 at the University of Sydney. The questionnaire contains data on the number of COVID tests, current learning and living conditions, personal attributes, and hopes for the future. After completing the data cleaning and verifying with various data tests, we can draw the following conclusions.

Data Cleaning

First, convert the data from the given CSV file into a data frame in R.
